

Safe-T-Tyre

Active Tyre Management Systems

Very easy installation: The system is delivered already programmed. You simply put the numbered sensors on the wheels, turn on the monitor and drive away.

The coded pairing technology means there is no need for a 'booster' or 'repeater' unit to be fitted in most cases.

Monitors pressure AND temperature of each tyre: So, while you're driving, you can see what the pressure and temperature of each tyre is in real time and be alerted if there is a slow leak, a fast leak or if the temperature is increasing due to some other complication like a brake problem or bearing failure.

3 alerts: Low Pressure, Fast Leakage, Temperature: Did you forget to check your tyre pressures before your trip? Wrongly inflated tyres cost you money in extra fuel and tyre wear.

Maybe you've got a puncture? The Safe-T-Tyre unit will alert you to a fast leak long before the tyre shreds and starts to cause some real damage.

Inclusions: System includes a suction cup mount, spare batteries and a comprehensive manual

Back up service and technical support: 2 year replacement warranty and a 1800 number.
